

BUSINESS PARTNERS PERSPECTIVE

Steve Mullin – Gyrodata
San Antonio – Oct 11th 2012

Truisms

- General level of knowledge about survey instrumentation (especially gyros) is low
- Survey programs often not designed
- Survey programs not followed through
- Poor understanding of accuracy and uncertainty

Suggestion

- Tell us what you want

- 
- What are the project requirements for accuracy
 - What are the reporting requirements
 - Do you have specific operational requirements
 - Do you expect an auditable trail of tool calibration
 - Do you expect an auditable quality system

- 
- Tell us planned survey program, ask for alternatives
 - Tell us the volume of work
