## About Us

Greetings from the **SPE, Wellbore Positioning Technical Section, ISCWSA**

### Our MISSION -

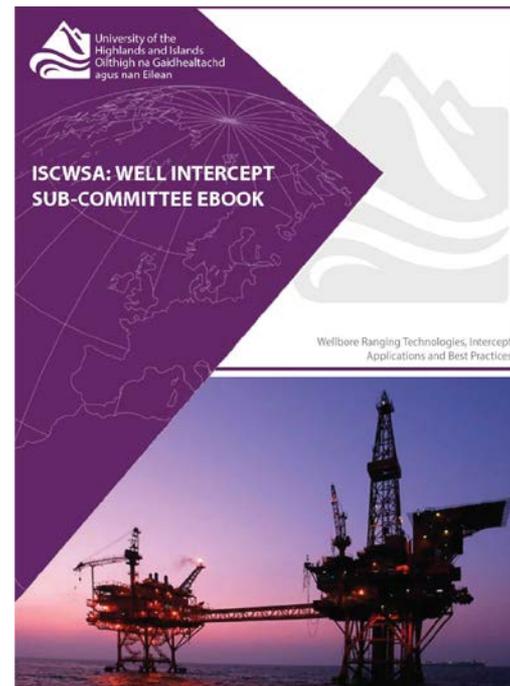

*"The primary aim of this group is to produce and maintain standards for the industry relating to wellbore survey accuracy. To set standards for terminology and accuracy specifications. Establish a standard framework for modelling and validation of tool performance. Raise awareness & understanding of wellbore survey accuracy issues across the industry."*

Work Group Project Docs:

Bibliography - Completed 2017

Lexicon finished to be published 2016 - Completed 2017

Ranging Section to be added to the ISCWSA e-book - Completed 2017

Best Practice - Completed 2017

Education Sub-Committee

**Mission Statement** - Since inception the sub-committee has been primarily focused on organizing SPE Applied Technology Workshops as a method of raising awareness of wellbore positioning issues to the broader industry. The workshop "Collision Avoidance and Wellbore Interceptions – Hits and Misses" has now been presented three times. The first was held in Inverness Scotland followed by Denver Colorado and most recently in Istanbul Turkey. With the exception of Istanbul, which came close, all sold out. The workshop will be repeated again in 2015, November 9th-11th at the San Luis resort in Galveston Texas. The workshop content has been updated and expanded and is now titled, "Well Placement Best Practice for Increasing Value and Reducing Consequence". Time will tell if this is the end of the road or we will run it again in another location.

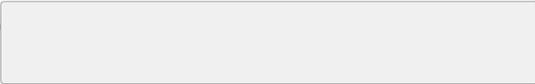

Recently it was agreed by the larger membership that the Education Sub should take editorial control for updates and expansion of the Joint Industry Project e-book "Introduction to Wellbore Positioning". We are currently in process of adding several new chapters to the book, they should be available later this year. The ISCWSA wellbore surveying, on-line competency course is now open for registration. Just to let you all know, the [website](#) is live. You can watch the [promotional video](#) there and see the course details. It is an introduction to the workings of a typical drilling rig and a quick tour of a working rig site.
